

# Create Your Unified View for Mobile Access

## SECURE, MOBILIZE AND SHARE FILES.

Many organizations have numerous files accumulated in Microsoft SharePoint, Windows File Shares or other Enterprise Content Management solutions. A bridge is needed to bind the new world order of external file sharing and mobile content management with the large volume of existing, business-critical content stored in these sites.

WatchDox® by BlackBerry® Content Connectors provides exactly this bridge, to keep the investments made in infrastructure and user training by extending SharePoint, Windows File Shares and others to the new world order. With WatchDox Content Connectors, enterprises can now manage all of their corporate content through a “single pane of glass” or unified view for Enterprise File Sharing, Mobile Content Management and Collaboration. .

### Empower Users with Secure Mobile Content Collaboration

The explosive adoption of powerful mobile devices such as iOS and Android-based phones and tablets have created a tidal wave of users who want to access corporate SharePoint and Windows Files Share documents on such devices.

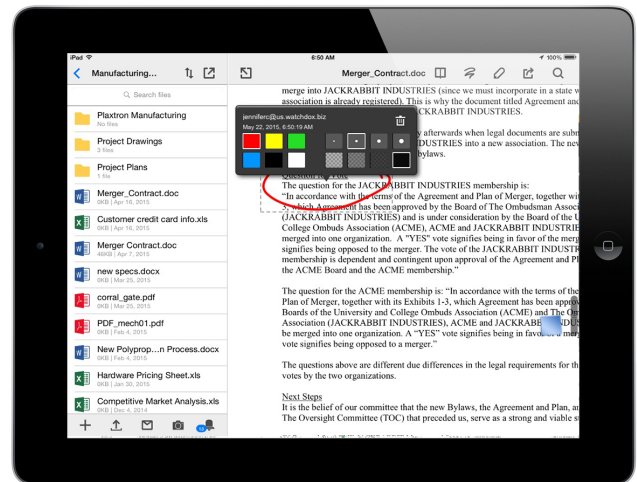

Through the combination of WatchDox Content Connectors and Mobile Apps, a Chief Financial Officer is able to access Board Presentations in a SharePoint library securely through his personal iPad. Through the same combination, an independent insurance agent can watch a training video file offline that is stored in a Windows File Share. Or a financial analyst can view a financial spreadsheet on SharePoint through the WatchDox Mobile App.

However, accessing and viewing a file is only the first level in the hierarchy of needs of the mobile worker. The mobile knowledge worker of today needs not just high fidelity viewing of files but equally

important, the ability to annotate any file type and also save content edits back – all within a single secure and trusted mobile app.

WatchDox is architected specifically to address the multi-tier needs of the mobile worker. Now, picture the same Chief Financial Officer now making annotations on the board presentation or the financial analyst making edits to the spreadsheet and saving it back to SharePoint – all with the safe and trusted tools from BlackBerry.

Edit and Save Files from Mobile Devices to SharePoint and File Shares

# SECURELY EXTEND ENTERPRISE FILES TO EXTERNAL PARTNERS

Files do not only need to be accessed on work and personal mobile devices – they also need to be shared with customers, business partners, or industry regulators. As such, WatchDox Content Connectors are not only designed to support the need for Mobile Content Management and Collaboration but also to enable Enterprise File Sharing to the outside world.

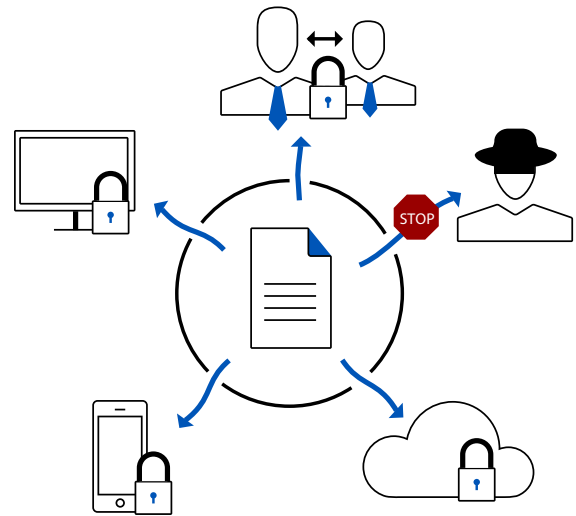

With WatchDox Content Connectors, audit spreadsheets for regulators can be shared from a SharePoint library, product design specifications in File Shares can be made available to outsource manufacturers or training videos can be shared with business partners.

Through WatchDox Content Connectors, in addition to basic file access controls, the Enterprise File Sharing controls that are unique to WatchDox can be applied as needed. Logging and controls such as “Online-view” or “Tracked view & print” for an encrypted and rights management protected version of the product design document can be applied as needed when SharePoint and File Share files are made available to external users.

Architected for the Enterprise:  
No File Replication, No Additional Cost and No Additional Fuss

WatchDox Content Connectors are designed not only for the smallest but also the largest enterprise organizations in mind. Enterprise organizations may have tens of SharePoint Sites, hundreds of libraries and petabytes of files that they want to connect to WatchDox. WatchDox Content Connectors neither require migration of files nor replication of files in SharePoint and File Shares. The unique architecture delivered by WatchDox means that multiple sites or shares are supported, select Libraries or folders can be chosen and additional storage costs are avoided.

## REALIZE THE VISION OF TOMORROW: A UNIFIED VIEW FOR YOUR EFSS NEEDS

Enterprise data comes from many different sources – PCs, mobile devices, SharePoint, File Shares and more. However, regardless of where the files are coming from, the business needs of file sharing and mobile access are universal.

With Content Connectors, WatchDox by BlackBerry is realizing a vision where a Unified View of workflows, security policies, logging and productivity tools can sit on top of all enterprise files – wherever they reside.
