

BES12: The Highly Secure Multi-OS EMM Solution by BlackBerry

Enhance Your Productivity and Security

BES®12 is a complete solution for managing policy across your growing fleet of mobile devices. With robust cross-platform support for device policy on all common mobile devices, BES12 is designed for today's heterogeneous mobile environment.

The Solution

Securely manage mobile devices and other endpoints across different operating systems and ownership models (personally owned or corporate liable devices). Control your mobile workers' access to apps, data and content. Do it all from a single, easy-to-use console that offers a complete set of IT policies and profiles to suit your needs and preferences.

Supports a Wide Range of Mobile Devices

BES12 opens up a world of choice for your mobile employees. BES12 supports iOS, Android™, Windows, OS X and Windows Phone and others from a single console. For the growing number of Android devices, BES12 natively integrates with common device-level security approaches including Samsung KNOX and Android for Work. With BES12, you can easily set policy controls across a wide array of mobile devices, detect and restrict access from jailbroken/ rooted devices, and more. No matter your device mix, BES12 keeps you in control.

Flexibly Integrate with Your Existing Infrastructure

BES12 is open and integrates with many of the most common solutions in use in the enterprise. In addition to its integration with multiple mobile platforms, it can proxy traffic for standard protocols like Exchange ActiveSync, restrict access to network resources through integration with Cisco ISE and much more.

Ready for Today and Tomorrow

Because it integrates with the Good Secure EMM Suites, BES12 is ready to meet all of your current and future needs.

As your organization evolves and your needs change, you can quickly add new capabilities to support enhanced collaboration, third party apps, app development or file-level DRM. With its unique flexibility to your changing needs, BES12 creates a solid foundation for your future mobile success.

Single Pane of Glass for MDM, MAM and MCM

BES12 provides administrators with a single pane of glass for managing all of their policies across devices, apps and content. In addition to MDM policies, administrators can set granular Mobile Application Management (MAM) policies on apps built using the Good Dynamics Secure Mobility Platform and can control access to content via WatchDox by BlackBerry. With BES12, IT gains unprecedented control over their entire mobile estate from a single solution.

Lower, More Predictable Mobility Costs

By consolidating multiple solutions, BES12 helps your organization standardize infrastructure while reducing complexity and risks. With subscription licenses flexibly designed to meet your changing needs, you can avoid high up-front costs while gaining the flexibility to scale up or down as your needs change over time.

Award Winning Technical Support

BlackBerry's award-winning tech support always has your back. BES12 comes standard with 24x7 global access to experts and a 2-hour response time for high severity issues.
