**How to read the Compatibility Matrix**

As new service packs are released, the recommended versions were the environments tested at the time of the BlackBerry Enterprise Server (BES) release. If a cell is blank it means that as new third party versions are released the general strategy is to test with the then current BlackBerry Enterprise Server (BES) version so older versions were not necessarily reviewed or assessed for newer third party versions. Also as third party versions age, they will not necessarily be tested with current versions of BES.

**Server Virtualization: BlackBerry® Enterprise Server and BlackBerry Enterprise Server Components**

Virtualization is a proven and stable technology designed to accurately emulate computer hardware. Currently, BlackBerry® Enterprise Server is not tested with the multitude of server hardware options available in the market, consequently, testing of the various virtualization solutions was deemed as redundant and no longer necessary.
